I am a software engineer who enjoys understanding problems, exploring solutions and putting what I learn into practice. In my projects, I value user experience and attention to detail as much as technical functionality. Balancing project and work responsibilities throughout my studies shaped my approach to organized work and effective communication with people from different backgrounds.

EDUCATION

Eastern Mediterranean University | B.Sc. in Software Engineering

2018 – 2026 | Gazimağusa, Cyprus

INTERNSHIP EXPERIENCE

Gazimağusa Municipality | Mobile Front-End Development Intern

June 2024 – August 2024

- During my internship, I worked on the application's front-end and mobile interface, which presents municipal services and content on mobile devices. Using React Native/Expo, I developed screen structure, components and reusable UI components and navigation structures.
- The project brought together multilingual support, live weather data, interactive galleries, service pages, and citizen-focused features within a clearer and more consistent application experience.

SELECTED PROJECTS

Gazimağusa Municipality Smart City Application | Graduation Project

- I contributed to mobile UI/UX design, navigation and API integration. I also supported web administration interface development and manual functional testing of municipal services.

Award: First Place, Graduation Project

Personal Portfolio Website — I built a personal website with React and Vite to showcase my projects, with a responsive interface for different screen sizes.

Quadcopter Motion Control — I contributed to project documentation and reporting on technical work discussed in team meetings.

Pharmacy Information System — I analyzed patient, prescription and stock requirements and contributed to interface design and test documentation.

DES Encryption in ECB Mode — I worked on encrypting fixed-size data blocks using the DES algorithm in Electronic Codebook mode.

Website Testing — METU Northern Cyprus Campus — I participated in testing website functionality, usability and interface consistency.

Organized Waste Disposal System — I worked on system design in a team project aimed at coordinating waste-disposal activities and information flow.

Online Second-Hand Book Shop — I worked on a JavaScript, HTML and CSS interface designed to make book listings easier to browse.

TECHNICAL SKILLS AND LANGUAGES

Development: JavaScript, TypeScript, Python, React, React Native, Expo, HTML/CSS

Tools and methods: Git, Figma, REST APIs, UI/UX design, manual testing, Agile teamwork

Languages: Turkish — Native | English — Good command

ADDITIONAL WORK EXPERIENCE

Deniz Shop DAÜ | Part-time | 2024 – Present

I continue to work at the copy center where I started during my university studies. I work directly with customers, applying my communication, attention to detail and time-management skills.
